Urban Traffic-light Control in IoT (IoT-UTLC) Project

Aghiles DJOUDI

LIGM/ESIEE Paris

April 4, 2019

Outline

1. Introduction

2. IoT-UTLC Project

3. Conclusion

Context

Introduction

- IoT Applications
  - Health care
  - Transportation
  - Industry
  - Market
  - Scool
  - Vehicles
  - Smart Home
  - Agriculture

Technical choice

Implementation

- ZOLERTIA RE-MOTE
  - Low consumption component
  - ADC port for placing sensors on it
- CONTIKI OS
  - Operating system for wireless and low power development
  - Support for newer standards (6LowPAN, RPL, CoAP, MQTT)
- 6LowPAN
  - Based on IPv6 and IEEE 802.15.4
  - IPv6-based network with low power consumption
  - Ability to create a mesh network
- Sending packages
  - UDP in the 6LowPAN network
  - MQTT between the cloud platform and the router
